

This training equips Solution Administrators with essential knowledge of the Cumulocity IoT platform, focusing on its architecture, domain model, and core functionalities. Participants will gain deep insights into platform administration, including user management, role-based access control, and tenant configuration, while mastering the Digital Twin Manager for effective device representation and management. The course covers the fundamentals of Cumulocity applications and their administration, enabling administrators to effectively manage and deploy IoT solutions across their organization's ecosystem.

**Duration:** 4 hours

**Achievements:** Exam Pass Certificate

### Learner Profile

- Users administrating Cumulocity

### Required Knowledge

No requirements

### Next Steps

- Cumulocity IoT Professional course

### Learning Objectives

- Cumulocity Platform
- Cumulocity Domain Model
- Administration
- Digital Twin Manager (DTM)
- Applications

---

### Activities

- Learning Videos & Demos
- Hands-On-Labs
- Exam
