

This training equips data analysts with essential knowledge of the Cumulocity domain model, enabling them to understand and work with the platform's data structure and relationships effectively. Students will master streaming analytics and the Analytics Builder, learning to create real-time data processing workflows and custom analytics models for immediate insights and actions. The course concludes with Cumulocity DataHub, where participants will learn to manage, transform, and analyze large volumes of data, enabling advanced reporting and data integration capabilities for informed decision-making.

Duration: 4 hours

Achievements: Exam Pass Certificate

Learner Profile

- Analytical thinkers, data-driven professionals, and problem solvers

Required Knowledge

No requirements

Next Steps

- Expert Courses

Learning Objectives

- Cumulocity Domain Model
- Streaming Analytics
- Cumulocity DataHub

Activities

- Learning Videos & Demos
- Hands-On-Labs
- Exam
