This course provides an introduction to Cumulocity IoT Edge on Kubernetes, the single-server variant of the Cumulocity IoT platform. Edge on Kubernetes represents a solution for delivering, deploying, and managing Cumulocity IoT Edge. It retains the capabilities of the Cumulocity IoT Edge Appliance VM with same benefits as autonomy, data reduction, and responsiveness. Cumulocity IoT Edge is installed on the same site as the IoT assets. You will learn how to set up and install Cumulocity IoT Edge on Kubernetes, and how to connect to a Cumulocity IoT cloud tenant. A series of demos will show you how to apply this knowledge.

Duration: 65 min   **Achievements:** Attendance Badge

Learner Profile

- Solution Architect
- Integration Specialist
- Administator

Required Knowledge

Cumulocity IoT Basic Understanding

Next Steps

Cumulocity IoT Professional Course

Learning Objectives

- Cumulocity IoT Edge Overview
- Cumulocity IoT Edge on Kubernetes
- Infrastructure and Installation
- Accessing Cumulocity IoT Edge
- Deployment

Activities

- Learning Videos & Demos
