

The Cumulocity IoT Data Grid provides a generic way to easily set up tables in the UI. It is highly customizable and configurable. In this training, consisting of 3 parts, you will learn the basics and how to implement a minimal setup using local data (part 1), how to configure the grid to perform filtration and sortation on server-side (part 2) and how to customize the grid (part 3). Demos for each chapter show how you apply this knowledge

Duration: 3 hours

Achievements: Attendance Badge

Learner Profile

- Solution Architect
- Frontend Developer

Required Knowledge

- Experience with Cumulocity IoT web SDK

Next Steps

- Expert modules in the categories:
- IoT Solutions

Learning Objectives

- Introduction
- Setup
 - Demo
- Connecting to a Data-Source
 - Demo
- Advanced Topics
 - Demo

Activities

- Learning Videos & Demos
